

Project 0.1.5 Present and Reflect

PLTW

PRESENT AND REFLECT

Communicating Results

Project Checklist

Delivering an Effective Presentation

Conclusion

Communicating Results

GOALS	RESOURCES
• Reflect on individual and team success through the engineering design process. • Create and deliver an effective presentation. • Discuss effective presentation skills. • Discuss the quality of evidence of the engineering design process in presentations.	
GOALS	RESOURCES
• <u>Building Effective Presentations</u> • <u>Delivering Effective Presentations</u> • <u>Active Listening and Interpreting</u>

All great products and ideas need a good sales and [marketing](#) team to share them with the world. You have chosen your design solution, built your prototype, tested, and iterated it; now you need to share your design with your client and communicate what you've learned through this process.

Your product is designed specifically for a client, but it may be helpful to other customers in the future. Your job now is to communicate the lessons learned through your design process and create a marketing pitch to reach your client and others who could benefit from it as well.

1

Review the [Building Effective Presentations](#) resource.

2

Create a six- to eight-minute presentation that includes the items listed on the Project Checklist.

Shoe For You Advertisements

Use the Video Advertisement Example and Print Advertisement Example as inspiration for your own ad.

VIDEO ADVERTISEMENT EXAMPLE

PRINT ADVERTISEMENT EXAMPLE

Use these Shoe For You advertisements as inspiration for your own ad.

Project Checklist

Product Marketing Pitch Presentation

- Summary of your design process.
 - What problems did you need to solve for your client?
 - How did you design a solution that met your client's criteria and constraints? Include your team's brainstorming.
 - How did you determine your final solution? Include all technical drawings, decision matrices, other evidence of your decision-making process, and how those tools helped you create your final design.
 - How did you construct your prototype?
 - How did you test and what were the results?
 - How did you iterate and improve your design based on your testing?
- Research about materials you would like to use to make your product if you could use any materials you wanted.
 - Include the final cost of your product based on chosen materials.

- Overall successes and areas of improvement of your design process and general teamwork.
- Short advertisement for your client and additional customers that your product could benefit.
 - Include a visual aid that supports your advertisement.

NOTE: Refer to the **Project 0.1.5 Rubric** to ensure you meet all project requirements.

Delivering an Effective Presentation

When your presentation is complete, you can deliver it to the appropriate audience. One of the keys to success when delivering any presentation is preparation. Lucius Annaeus Seneca, one of the famous philosophers of Ancient Rome, said, “Luck is when preparation meets opportunity.”

It is crucial to spend meaningful time practicing your presentation as a team to become comfortable in front of a live audience. It takes everyone different amounts of time to develop comfort in presenting, but the more you practice, the faster that comfort will come.

3

Review the [Delivering Effective Presentations](#) resource.

4

Practice your presentation with your team.

5

Deliver your presentation and be an active listener during classmates' presentations. Refer to the [Active Listening and Interpreting](#) resource for tips.

Conclusion

Question 1

What was successful about your individual contribution to the team presentation? What do you need to improve on for the future and how do you plan to do so?

Question 2

Which sections of the engineering design process do you feel most confident with? How can you build off of that success?

Question 3

Which sections of the engineering design process do you want to improve on? How do you plan to do so?
